

CONVENTIONAL ROOFS

NEW CONSTRUCTION / RE-ROOFING

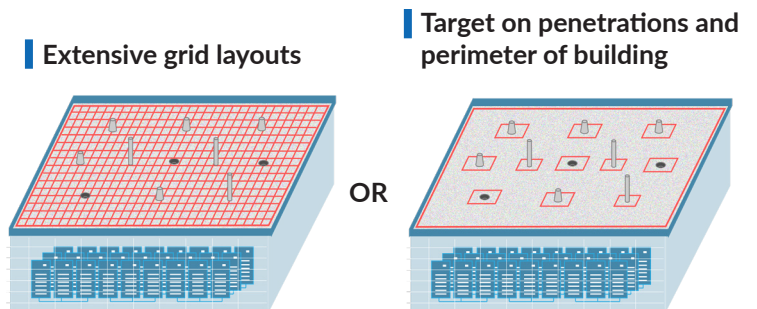

Ensure your roof assembly is dry from the very beginning.

Solution 1: Building Intelli™ Moisture Monitoring

Protect the business and building assets below the roof.

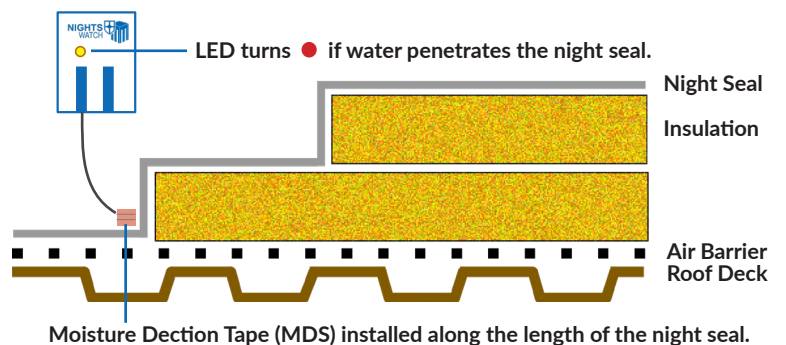

- Know where the roof is wet - but also dry.
- Confirm the exact installation conditions.
- Automated system assists during commissioning process - locates damage during construction.
- Utilized for construction dry out for sustainable methods to dry out the roofing system in-situ.

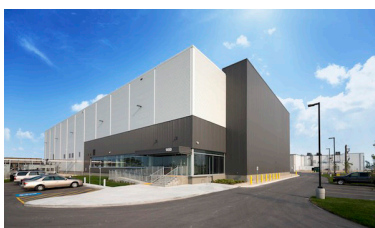

Solution 2: Nights Watch During Construction

Save Time | Reduce Costs | Stay Informed | Uphold Quality | Be Proactive

- Monitor your night seal.
- Night seals and tie-ins are often the sources for entrapped moisture, especially when your roof is faced with thunderstorms, winter rains, and weather during the construction period.
- Nights Watch device reports wirelessly to your computer on the status of the night seal prior to opening it.
